Wind Direction(Degree)	248	103	128	136	119
Cloud Cover(Octa)	6	6	7	7	7

Weather Summary/Alert:

• In Bhivapur block, as per the block level value added forecast given by, IMD, RMC, Nagpur, sky will be mostly cloudy during next five days i.e.05th to 09th, October, 2022. • Very light to light rainfall very likely to occur during next five days and thunderstorm with lightning very likely to occur on 05th, 06th and 07th, October, 2022. • As per the extended range forecast system in Vidarbha Sub Division region during 09th to 15th, October, 2022 rainfall will be normal as well as maximum and minimum temperature will be normal. • Validity of forecast- till 08:30 AM of mentioned dates.

General Advisory:

• Cover the harvested produce of soybean and other matured crop with plastic sheet and threshed produce at safer places by considering the rainfall forecast as well as spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Considering the very light to light rainfall forecast, it is advised that harvested produce of soybean, green and black gram and other crops should be covered with plastic sheet and stored at safer places. • Farm work should be planned only by considering the local weather forecast and warning. Farmers and farm laborers should take shelter in a safe place in view of the possibility of lightning along with rain and thunder. • Priority should be given to finish the most important work in the field preferably in the early morning hours.

SMS Advisory:

• Harvesting and threshing should be carried out of matured early sowing and short duration soybean and matured crop should be carried out during early morning hours by judging local calm & clear weather condition.

Crop Specific Advisory:

Crop(Varieties)	Crop Specific Advisory
-----------------	------------------------

Crop(Varieties)	Crop Specific Advisory
COTTON	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Spray 2% urea at flowering stage and 2% spray of DAP along with a spray 1 % Urea and 1 % Magnesium sulphate at boll development stage to avoid reddening of cotton in later crop stage. • Prophylactic sprays of Copper oxychloride 50 WP/WG @25-30 g followed by Propiconazole 25 EC @10 ml or Propineb 70WP @25 g mixed in 10 litres of water after seven days is suggested to manage internal boll rot disease. • In some parts occurrence of <i>Corynespora</i> leaf spot disease has been noticed on lower canopy and bracts. Foliar spray of Carbendazim 50 WP@1 ml/litre or Propiconazole 25 EC@ 1 ml/litre or (Metiram 55% +Pyraclostrobin 5% WG) @ 2 g/litre or (Azoxystrobin 18.2% w/w + Difenoconazole 11.4% w/w SC) @1 ml/litre or (Fluxapyroxad 167 g/L + Pyraclostrobin 333 g/L SC @0.6 g/litre of water is recommended for its management. • Keep a vigil on the attack of sucking pests and apply spray when infestation seen above ETL, i.e., Flonicamid 50 WG @ 80 g or Dinotefuran 20 SG @ 60 g/acre or Thiamethoxam 25 WG @ 40 g/acre during clear weather condition. • Install pheromone traps @ 2 per acre to monitor PBW infestation. Whenever 6-8 moths /trap for 3 consecutive nights are recorded or 10% rosette flowers or green boll damage are recorded, spray Profenophos 50 EC @ 600ml or Indoxacarb 14.5 SC @200 ml/acre or Emamectin benzoate 5 SG @100 g or Chlorpyrifos 50 % EC @ 500ml per acre to control PBW. Use eggs @1.5 lakh/ha of <i>Trichogramma</i> in cotton field to manage PBW. • If parawilt symptom is observed in cotton due to rains, drench the affected plants with Copper oxychloride 50 WP@25 g+ Urea 150 g in 10 litres of water. • To manage fungal foliar spots and fungal boll rot diseases, apply Carbendazim 50 WP @10 g or Kresoxim-methyl 44.3 SC@10 ml or Propineb 70 WP@25 g or Propiconazole 25 EC@ 10 ml or Metiram 55% +Pyraclostrobin 5% WG @20 g or Azoxystrobin 18.2% w/w + Difenoconazole 11.4% w/w SC @10 ml or Fluxapyroxad 167 g/l + Pyraclostrobin 333 g/l SC @ 6 g mixed in 10 litres of water.
COTTON	<ul style="list-style-type: none"> • It is recommended to spray NAA 4.5 SL@ 3-4 ml /10 litres of water to avoid natural shedding of squares and flowers of cotton and it is also suggested to undertake the spray of chlormequat chloride 50% SL @ 1-2 ml per 10 litres of water or Mepiquat Chloride 5 % SL @ 10 ml/10 litre of water to restrict the excess vegetative growth of cotton.
SOYABEAN	<ul style="list-style-type: none"> • Farmers who have grown early maturing soybean varieties are advised to harvest the crop after 90% pods have turned yellow. This will not have adverse effect on the seed germination. The crop must be dried immediately in sunlight protecting from rain or under shade. • The harvested crop must be threshed after sun drying. If the threshing is not done immediately, it should be stored at safe place protecting from rains. • If the produce is to be used for seed purpose in the next season, farmers are advised to thresh the soybean at 350 to 400 RPM thresher to avoid the loss of seed germination. • Spraying of agrochemicals, fertilizer application in standing crop & intercultural operations should be carry out during early morning hours by judging local calm & clear weather at Wafsa condition.
SOYABEAN	<ul style="list-style-type: none"> • Farmers who have cultivated late sown or late maturing varieties, As a precautionary measure, farmers can apply the spray of any one of the following recommended fungicides which may also improve the quality of grain and seed. These includes Tebuconazole 25.9% EC (625 ml/ha) or Tebuconazole + Sulphur (1250 g/ha) or Pyraclostrobin 20% w/w WG (375-500 g/ha) or Pyraclostrobin 13.3 g/l + Epoxiconazole 50g/l SE (750 ml/ha) or Fluxapyroxad 167 g/l + Pyraclostrobin 333 g/l SC (300 ml/ha) or Pyraclostrobin 133 g/l + Epoxiconazole 50g/l SE (750 ml/ha).

Crop(Varieties)	Crop Specific Advisory
RICE	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Pest management: - • Plant hoppers: - Although rice crop is prone to plant hoppers, use <i>Metarhizium anisopliae</i> as a bio-insecticide @ 2.5 kg/ha. Buprofezin 25% @ 16 ml for control as soon as the level of financial loss is exceeded. or Imidacloprid 17.8 SL @ 2.2 ml. or Fipronil 5 SC @ 20 ml. or Flonicamid 50 WG @ 3.0 gm Mix in 10 liters of water and spray. • Stem borer: - Bio-control: - Pheromone traps should be set 20 per ha. <i>Trichogramma japonicum</i> (Trichocard) is a parasitic insect release 50,000 eggs per hectare 3 to 4 times every 7 days. Azadirachtin 0.15 % (1500 ppm) @ 30-50 ml as soon as 5 % infested footway appears in the field • Chemical control: - Spray quinalphos @ 32 ml. or Carbosulfon 25 % @ 16 ml. Spray mixed with 10 liters of water or Carbofuran 3% granular @ 25 kg per hectare or Fipronil 0.3% granular @ 16.67 kg. per hectare When there is water in the paddy land, it should be applied. • Gall midge: - Apply Carbofuran 3% G @ 25 kg per hectare by maintaining water level 7 to 10 cm. Do not remove water from paddy bunds for 4 to 5 days. These pesticides should be used again after 30 days as required. • Disease management: - • Blast and Neck blast: - Spray Hexaconazole 5% EC @ 20 ml. or Mancozeb 75% @ 30 gm per 10 liters of water. • Bacterial leaf blight: - Spray Copper hydroxide 53.8% DF @ 30 gm + Streptomycin 1.5 gm per 10 liters of water.

Horticulture Specific Advisory:

Horticulture(Varieties)	Horticulture Specific Advisory
BRINJAL	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Due to higher humidity and cloudy weather condition in last week, if the incidence of fruit and shoot borer is noticed on brinjal crop, spraying should be done of any of following insecticides on crossing ETL, Carbosulfan 25 % EC 1250 ml per hectare or Deltamethrin 0.280 % EC 400 to 500 ml per hectare or Emamectin benzoate 0.5 % SG 200 gram per hectare or Lambda-cyhalothrin 0.490 % CS 300 ml per hectare or Spinosad 45 % SC 162 to 187 ml per hectare or Thiacloprid 21.70 % SC 750 ml per hectare or Chlorantraniliprole 0.930 % + Lambda-cyhalothrin 0.460 % ZC 200 ml per hectare mix with in 500 litres of water per hectare.
CHILLI	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Due to alternative low and high temperature coupled with high humidity, if the powdery mildew disease is noticed on chilli crop, spraying should be done of any of following fungicide, Hexaconazole 75% WG @ 66.7 gram or Tebuconazole 25% WG @ 500-750 gram or Azoxystrobin 8.3% + Mancozeb 66.7% WG @ 1500 gram or Boscalid 25.2% + Pyraclostrobin 12.8% WG @ 600 gram or Carbendazim 12% + Mancozeb 63% WP @ 750 gram or Kresoxim-Methyl 15% + Chlorothalonil 56% WG @ 1000 gram or Tebuconazole 10% WP + Sulphur 65% WG @ 1250 gram or Tebuconazole 50% + Trifloxystrobin 25% WG @ 250 gram mixed with in 500 litre of water per acre for management of disease.
TOMATO	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Due to prevailing wet condition if the incidence of early blight disease is noticed in tomato crop, it is advice to take spraying during clear and calm weather condition with Azoxystrobin 23% SC 500 ml/hectare or Pyraclostrobin 20% WG @ 375-500 gm/hectare mix with in 500 litre of water per hectare on ETL.

Horticulture(Varieties)	Horticulture Specific Advisory
MANDARIN ORANGE	<ul style="list-style-type: none"> • Spraying of agrochemicals and fertilizer application in standing crop should be postponed for next 3 to 4 days and thereafter carry out during early morning hours by judging local calm & clear weather condition. • Sowing of seeds of rootstocks of Jamberi/Rangpur lime may be done in plastic trays. Manage fruit sucking moth by preparing a poison bait containing 10 ml malathion, and 100 ml orange juice mixed with 100 g gur (jaggery) in 900 ml of water. Fill it in a broad mouth bottle and hang two bottles per 25 trees all over the orchard. Create smoke in orchard with grass (wet), cow dung cakes and neem leaves in the late evening hours i.e. 7.00 to 8.00 pm to repel the fruit sucking moth. To manage fruit fly, install (methyl eugenol traps) @ 20 traps per hectare from 60 days before fruit harvest and change the lure after every 30 days. Follow clean cultivation in orchard and bury fallen fruit in a pit and cover it with soil every day. For Phytophthora infected trees, spray and soil drench with mefenoxam MZ 68 @ 2.5 gm / litre or fosetyl Al @ 2.5 gm per litre covering the tree canopy. Weeding and harrowing operation should be done in the orchard. Spray carbendazim @ 1 gm per litre at 15 days interval for Ambia crop. Spray 2,4-D @ 1.5 g + urea 1% followed by gibberellic acid 1.5 gms after 15 days for control of pre-harvest fruit drop in Ambia crop. For increasing fruit size in Mrig crop follow alternate foliar spray application of 2, 4-D or gibberellic acid @ 1 g in combination with either monopotassium phosphate, diammonium phosphate, potassium nitrate @ 2% at 15-20 days interval depending on the crop load. Mentioned spraying operation should be done by judging local clear weather condition.

Live Stock Specific Advisory:

Live Stock(Varieties)	Live Stock Specific Advisory
BUFFALO	<ul style="list-style-type: none"> • Cows, buffaloes, goats, sheep and other domestic animals should be avoided to graze in open spaces considering the possibility of thunderstorm with lightning. Animals should be kept away from open water sources, rivers or lakes and away from tractors and other metal implements. • The floor of the animal shed should be kept dry and clean. • The feed and fodder should be stored properly to prevent the growth of moulds. • Maintain the surrounding of animal shed clean and hygienic and remove the unwanted vegetation nearby the sheds.
COW	<p>Lumpy skin disease: symptoms and preventive measures:- Symptoms of the disease:</p> <ol style="list-style-type: none"> 1. Lumpy skin disease (LSD) is caused by infection of cattle or buffalo with the pox virus- lumpy skin disease virus (LSDV) which is species under the genus capripox virus. 2. Nodules appear on the head, neck, legs, dewlap, rump, around the genitals and all over the body of cattle and buffaloes. 3. Scabs form to the centre of the nodule, eventually fall off and develop lesions. 4. Swelling of the feet, groin and genitals may occur. 5. Animal become off feed and cannot walk properly. 6. Discharge from nose and eyes. 7. Milk production decreases. 8. May cause abortion in pregnant animals. <p>Preventive measures:-</p> <ol style="list-style-type: none"> 1. Cow, buffalo and bull shed should be kept well ventilated and clean. 2. Buying and selling of cattle should be restricted. 3. Animals should be fed with healthy and nutritious diet. 4. Formalin, phenyl, sodium hypochlorite, etc. should be used for regular disinfection of cowsheds. 5. Regular spraying of medicated water containing safe pyrethroid ingredients like cypermethrin, deltamethrin should be done to control ectoparasitic infestation. (eg flies, mosquitoes, ticks, mites, fleas etc.). 6. The natural fumigation with burning of neem leaves in cowsheds can prevent infestation of ectoparasites like fleas, mosquitoes etc. 7. Immediately isolate the sick animal and seek advice/ treatment from registered veterinary practitioner. 8. Vaccinate healthy animals with goat pox vaccine. <p>Treatment:-</p> <ol style="list-style-type: none"> 1. There is no specific treatment for this disease. 2. Anti-inflammatory, anti-pyretic, anti-histaminic drugs should be used according to the symptoms. 3. Mineral and vitamin supplements should be given to increase appetite and immunity. 4. Antibiotics may also be used to prevent secondary bacterial infection.

Others (Soil / Land Preparation) Specific Advisory:

Others (Soil / Land Preparation) (Varieties)	Others (Soil / Land Preparation) Specific Advisory

Others (Soil / Land Preparation) (Varieties)	Others (Soil / Land Preparation) Specific Advisory
GENERAL ADVICE	<ul style="list-style-type: none"> • Maximum distance between two persons should be maintained without allowing farm laborers to work together in the field. • While taking shelter in the field, take shelter at a maximum distance from water sources (well, lake, river etc.), high places (trees, hills), metal implements. Farmers and farm laborers should avoid sheltering under trees and animals should also avoid sheltering under trees. • Farmers should take care of thunder and lightning in the sky: If you are working in the field, take shelter immediately near the field. After taking shelter in a safe place in the field, keep dry wood, plastic, gonapath, dry mulch under the feet. Sit with both feet together and both hands on your knees. Make sure that no part of your body touches the ground except your feet. Individuals working in ponds, such as places where there is moisture in the soil or water sources, should go to a safe and dry place immediately. If there are tall trees nearby, take shelter at a distance twice the height of that tree. A pucca house is the safest place to avoid lightning. Farmers should plant trees as low as possible around their houses and livestock sheds. Moist, swampy places and water sources (wells, lakes, rivers, farm ponds etc.) should be avoided as much as possible. If traveling in a four-wheeler, stop in the vehicle. Farmers should take care that they do not have any metal tools. When working in the field, do not let more people work together at the same time. Care should be taken to keep a distance of at least 15-20 feet between two persons. Do not use an umbrella with a metal rod. Stay away from other electric tools made by farmers as well as metal ones.
